On initial evaluation, he was found to have pancytopenia with hemoglobin 5.7 g/dL, total leukocyte count 500/ μ L, and platelet count 81,000/ μ L and 4% circulating blasts. After informed consent, bone marrow aspiration and biopsy were performed. The provisional bone marrow report was consistent with acute myeloid leukemia (AML). Final bone marrow aspiration, biopsy, flowcytometry and bone marrow chromosomal analysis reports are awaited. In view of persistent fever spikes, the patient was started on intravenous meropenem, teicoplanin (Targocid), and colistin. HRCT thorax showed multifocal areas of consolidation with surrounding ground-glass opacities in the left upper and lower lobes, suggestive of fungal pneumonia; hence, the patient was started on oral voriconazole. In view of persistent fever spikes, antibiotics hiked up to Ceftazidime-avibactam and aztrenoam. Currently, the patient continues to have severe cytopenia with febrile neutropenia and requires IV antibiotics, antifungal therapy, transfusion support, regular monitoring of blood counts and vitals, and other supportive measures and plan to initiation of chemotherapy (Azacitidine-Venetoclax).
